

AUDIO-MANIACS TRANSFORMER

detailed manual

front

indicators:

operation

green LED

controls:

switch on / off

1

where to place:

For shielding reasons the transformer should be placed on the bottom, as the upper cover works as an additional shield.

The transformer supports up to 6 units with the necessary current/voltage. To connect, the multipin female plug takes up the respective multipin male plug at the cable from the unit above.

Switch off the transformer while connecting. Do NOT connect or disconnect the plugs while the transformer is operating. Watch the green LED.

Each unit takes up the cable from the unit above. The kind of unit does not matter, a maximum of 6 units is supported.
